

Section 9 – Neglect and Deprivation

Primary Resources

Title, Date & Author	Brief Synopsis	Additional Notes
<p>Block, R.W., Krebs, N.F., the American Academy of Pediatrics Committee on Child Abuse and Neglect, & the Committee on Nutrition. (2005). Failure to Thrive as a Manifestation of Child Neglect. <i>Pediatrics</i>, 116(5), 1234-1237. Retrieved July 13, 2021, from https://www.icmec.org/wp-content/uploads/2015/10/FTT-as-Manifestation-of-Neglect-AAP-2005.pdf</p>	<p>Failure to Thrive (FTT) is defined as a significantly prolonged cessation of appropriate weight gain compared with recognized norms for age and gender. FTT in infants and children results from inadequate nutrition to maintain physical growth and development, raising concerns about child maltreatment.</p> <p>The article describes the incidence and causal factors, opining that poverty is the most significant single risk factor for FTT worldwide and in the United States. However, other factors may be present when child neglect is involved, i.e., lack of extended family assistance, social isolation of family and substance abuse.</p>	<p>This article is a clinical report that focuses on considering, evaluating, and managing FTT when child neglect is present.</p> <p><i>To retrieve the article use the link below:</i></p> <p>https://ocfcpacourts.us/wp-content/uploads/2021/09/1.-Failure-to-Thrive-as-a-Manifestation-of-Child-Neglect..pdf</p>
<p>Center on the Developing Child. (2012). <i>InBrief: The Science of Neglect</i>. Harvard University.
